WEATHERPROOF LIGHTWEIGHT COMPOSITE CLADDING THAT'S EASY TO INSTALL

Coastline, an innovative composite cladding system that lifts the appearance of any property and adds up to 10 years of guaranteed weatherproof performance to every exterior.

It's made from a unique new Eurocell composite material that means it's incredibly resilient, yet amazingly easy to work with and fit. What's really revolutionary though is that Coastline has minimal contraction or expansion, whatever the weather conditions.

Custom fixing system

Time is money, and Coastline's specially developed aluminium rail and fixing system helps you make more of both. It provides rapid, secure fixing, every time.

Because there's no mortar or render involved, you can fit it in all weathers. And because it's much lighter than fibre cement cladding products, it won't stress exterior walls or threaten their structural integrity.

More colours, more opportunities

With the new range of Coastline cladding now available in six through colours, you can also offer to upgrade your customer's roofline in a range of complementary colours.

Colour coded trims to complete your installation

Coastline is supplied with a full range of colour co-ordinated, full powder coated aluminium trims and end closers.

Fire safe performance – UK Tested (2018) to BS EN 13501

Coastline has been rigorously tested for hundreds of hours. This includes fire performance testing in the UK to BS EN 13501 by Exova Warringtonfire, an independent leading authority in fire testing.
